SUMMARY

Software developer with three-plus years building internal tools and automating manual business processes, mostly in Python, C#, and .NET. At my previous job I took a six-month estate recovery process down to about twelve days, and replaced a manual, week-long record search with a SQL-backed lookup that runs in seconds. Comfortable owning a tool from a rough idea through to something a whole team relies on day to day. Currently looking at software engineering, automation, internal tooling roles.

TECHNICAL SKILLS

Languages: Java, C#, JavaScript, TypeScript, Python, HTML5, CSS3

Frameworks & Tools: .NET, Node.js, Angular, React, REST APIs, Git

Databases: MySQL, MongoDB, SQL Server, Supabase

Focus Areas: Automation, internal tools, performance tuning, workflow engineering, data processing

PROFESSIONAL EXPERIENCE

Estate Recoveries — Software Developer

Jan 2023 – Mar 2026

Remote

- Built automation tooling in C#/.NET and Python that cut the estate recovery process from about six months to roughly twelve days.
- Replaced a manual search through a 400,000+ record MySQL database, which used to take several weeks, with Python scraping scripts and SQL doing the heavy lifting; results now come back in under five seconds.
- Spent a good chunk of time on production debugging, tracking down recurring issues in the C#/.NET codebase and bringing error rates down.
- Dug into performance metrics to find the real bottlenecks instead of guessing, then went after those directly.
- Kept data integrity intact across production systems and walked senior stakeholders through the technical reasoning behind the work.

Freelance — Full-Stack Developer

2022 – Present

- Built an IT ticketing system from scratch, with role-based access control, audit trails, and a drag-and-drop interface using Draggable.js.
- Move clients off paper-based processes onto responsive, SEO-optimized web apps; client base has grown roughly 4x since 2022.
- Write documentation clients actually use (architecture notes, deployment steps, what to do when something breaks) instead of generic handoff docs.
- Handle production issues directly with clients, which usually keeps downtime short enough that it isn't a real problem for them.

Frame Production — Junior Manager & Web Developer

2021 – 2022

- Split time between running daily operations and maintaining the company's website and internal systems.
- Took projects from an initial idea through design and final delivery; most of my full project lifecycle experience came from this role.
- Pushed a few workflow changes on the production floor that cut down overhead in a measurable way.
- Reviewed operational data regularly to spot trends and fed that back into decisions above my pay grade.

EDUCATION

Higher Diploma (NQF 5), IT Systems Developer (Full Stack Web and Software Developer)

Academic Institute of Excellence — Jan 2023
